

Freightliner Coronado Headlight Adaptor Kit

03-1610001

This kit allows the replacement of the factory headlight with an aftermarket LED projection style or virtually any other style 7" round headlight.

The bracket will be mounted in the fender as shown in the image on the left:

Note: the 4 factory mounting holes will need drilled out to 3/8"

IMPORTANT!!!

Depending on fitment, some slight trimming/grinding may need done on the headlight adjustment tabs for clearance in the fender. See the image to the right for reference.

Additional information:

The backside of the chrome headlight trim piece may require slight trimming to fit back over the new light and/or headlight adjustment or retainer tabs.

Of course, the OEM headlight plug will need replaced with a plug to fit the headlight of your choosing.

As always, the help of a test light will aid in assuring you locate the proper wires for high beam, low beam, ground, etc. and make sure you have power to the lights shut off prior to cutting off the original plugs!
